

## Litepanels to Receive First-Ever Emmy® Statue for Lighting Equipment Technology

Hollywood, CA - JULY 29, 2009

Litepanels, Inc., the worldwide leader in LED (light emitting diode) television and motion picture lighting equipment, will be awarded a Technology & Engineering Emmy® Award from the Academy of Television Arts & Sciences for its proprietary lighting systems.

Litepanels fixtures are used on a variety of network television productions including such high profile programs as *Desperate Housewives*, Fox's *24*, and *Without a Trace*. The Emmy statue is the first in the Academy's 61 year history to be awarded for television lighting technology, and will be presented on Saturday, Aug. 22, at the Renaissance Hotel in Los Angeles.

Litepanels innovative fixtures have become a staple in television production because of their extreme versatility and characteristically soft, HD-friendly light, which can be infinitely dimmed with no noticeable shift in color temperature. Litepanels eco-friendly lighting equipment is also attractive to production studios because it draws less than 10-percent the amount of power necessary for traditional lighting fixtures, and generates practically no heat.

Litepanels list of customers extends beyond television and feature production, and includes the Whitehouse and Pentagon Briefing Rooms, the International Space Station, CNN's Election Bus, news helicopters, and numerous TV news studios and ENG crews.

Litepanels to receive the 2009 Technology and Engineering Emmy Award

A **Technology and Engineering Emmy Award** is given by the National Academy of Television Arts and Sciences (NATAS) for outstanding achievement in technical or engineering development. The award is presented for developments ... in engineering technologies which either represent so extensive an improvement on existing methods or are so innovative in nature that they materially have affected the ... recording or reception of television.
